FlexSystem's product interface has been specially designed for effective data capturing, such that the operators can easily input all required information onto the quotation, turn it into order and then updated the details to the data server with a few keystrokes.

The automated order processing design helps to streamline the operation flow until the order is completed. Without time consuming data re-entry, the system generates quotation, sales order, packing list, delivery note, sales invoice, and updates accounting records, thus significantly simplifies the profiling procedure, as well as guarantees on-time delivery and high-level customer service.

- ☐ Effective data entry through easy to read UI,high speed keyboard operation, data look-up assistant and complete data validation
